

REDEFINING PATIENT ENGAGEMENT

Utilize the Fitango Health **Engagement Engine** to offer the resources and education your patient population needs to go from healthcare to self-care.™

An Innovative Way to Engage Your Patients

Fitango Health offers a comprehensive **Engagement Engine** that improves compliance and better the health of your patient population.

By using the **Engagement Engine**, you will extend your reach to the patient's home and community setting, enhancing the care provided by your organization and improving health outcomes.

Empowering the Disengaged

The Fitango Health **Engagement Engine** empowers your patients to become active participants in their own health and well-being. To satisfy this, we have a rich toolkit to enable the patient experience:

- **ActionPlans** - Build, publish, and prescribe custom ActionPlans to patients and/or their family members to report, stay engaged, and be monitored by their care team.
- **Alerts/Reminders** - Customize alerts and/or reminders for patient activities, complete with an escalation mechanism.
- **Family Dashboard** - Enable family members of the patient to connect with the system and be able to view and report on the users assigned plans.
- **Social Determinants Management** - Complete your patient's experience by referring them to programs based on their social determinants of health.
- **Medication Management** - Allow patients to manage their medications and supplements with reminders and alerts.
- **Social Support & Gamification** - Patients can invite friends and family to act as Motivators and earn points for every reported activity.

What is an ActionPlan?

ActionPlans are interactive health guides that combine educational components with detailed daily activity instructions to encourage patients to be more self-sufficient in attaining their health and wellness goals.

The **Engagement Engine** is equipped with a robust ActionPlan Builder that enables the rapid creation of new ActionPlans and customization of existing ones. By using your own content, you can easily build ActionPlans, complete with the addition of rich media (video, audio, images) and trackers to be available for your population.

ActionPlans can be prescribed to specific populations or downloaded by patients from the ActionPlan Store. Patients can invite their family and friends to act as Motivators on their ActionPlans and earn points for every reported activity.

Platform Key Features

- White-label and customizable
- Secure and HIPAA-compliant
- Highly integrated platform
- Includes telemedicine and remote-patient monitoring
- Cloud-based
- Web and mobile accessible
- Open architecture with complete API
- Embedded EMR interoperability using InterSystems HealthShare Connect*

*HealthShare Connect is a product of  **InterSystems**
