

REDEFINING CLINICAL TRIALS

Offer your participants the education and engagement they need while involved in a clinical trial

An Innovative Way to Engage Your Clinical Trial Participants

Fitango Health's clinical trial recruitment, engagement, and monitoring solutions enables you to create custom assessments, receive real-time alerts on your trial participants and provide intervention protocols that enable timely support at critical moments. The observations and data captured in the system will yield more accurate results to pave the way to receive drug approval for a healthier future.

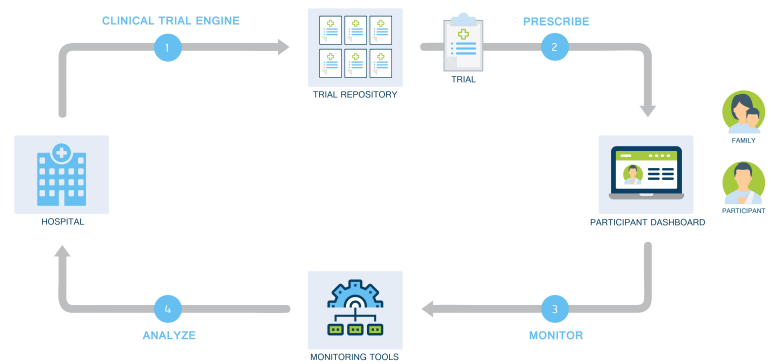

Empowering the Disengaged

The Fitango Health platform empowers your participants to become active and engaged in their own health and well-being. To satisfy this, we have a rich toolkit to enable the participant experience:

- **Assessments** - Build dynamic assessments, questionnaires, and surveys to assign to your participants, complete with our BRAHMS (Business Rules and Alert Handling Management System) component.
- **Medication Management** - Allow participants to manage their medications and supplements with reminders and alerts.
- **Alerts/Reminders** - Customize alerts and reminders for participant activities, complete with an escalation mechanism.
- **ActionPlans** - Build, publish, and prescribe custom ActionPlans (step-by-step health guide) to participants and/or their family members to report on, stay engaged, and be monitored by their care team.
- **Gamification** - Keep your participants engaged and compliant with an internal points and reward mechanism.
- **Daily Journal** - Allow participants to record their side effects, adverse reactions, and other pertinent information in a daily journal.

Clinical Trial Workflow

Fitango Health provides digital components for the key processes of participant recruitment, trial awareness, and educational resources. These modules can be made available to the public for general recruiting and information, as well as part of our engagement portal to encourage continued connection to potential participants.

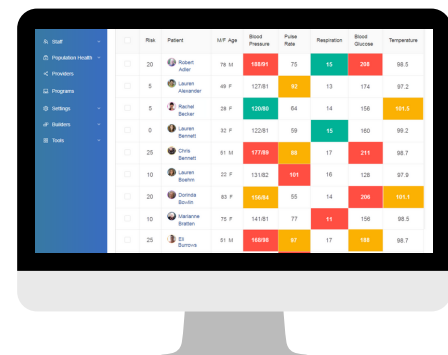

Fitango Health - Clinical Trial Workflow

Our engagement solution and medication adherence mechanism are equipped to help you ensure concordance on the part of your participants. We can help you recruit and engage your participants, their family and support team, and supply educational tools to build custom ActionPlans for pre-study, post-study and the entire clinical trial journey.

Managing Your Participants

Fitango Health provides you the tools needed to understand the outcomes of your participant population over time. Our machine-learning based technology enables you to build custom analytics featuring predictive tools, providing insights into the health, engagement, adherence, and overall risk of your population.
